Introduction. The purpose of this experiment is to test the accuracy and precision of the person doing the experiment as well as find the density of a metal rod. The accuracy and precision with which one performs experiments is a very important factor in their success as a scientist. In this laboratory, the accuracy and precision of my own laboratory techniques was tested by finding the mass, volume, and eventually density of a brass rod and comparing it to known values.

Few well-designed clinical trials and systematic research reviews suggest that Ayurvedic approaches are effective. Results from a 2013 clinical trial compared two Ayurvedic formulations of plant extracts against the natural product glucosamine sulfate and the drug celecoxib in 440 people with knee osteoarthritis. All four products provided similar reductions in pain and improvements in function.
