Left Hemisphere Mapping Contemporary Theory

Left Hemisphere: Mapping Contemporary Theory Today is a robust survey of critical theory in the 20th and early 21st century. Principally, Razmig Keucheyan traces the developments in Marxist thought, anti-Marxist thought, and emancipatory theory and the way those developments underpin the work of critical theory.

The Left Hemisphere: Mapping Critical Theory | Razmig ...

In Left Hemisphere: Mapping Critical Theory Today, Razmig Keucheyan has managed to assemble a rigorous and comprehensive cartography of the contemporary field of critical theory. Bold in ambition, panoramic in scope and praiseworthy in execution, I would certainly recommend this title to anyone seeking a coherent port of entry into the vast and often labyrinthine world of the critical left.

Left hemisphere : mapping critical theory today (Book ...

According to the Left-Brain Right-Brain Theory, the different hemispheres of our brain control different types of cognition. The left hemisphere is said to be more objective, practical, and analytical, while the right hemisphere is said to be more subjective and thoughtful. Yet, of course, the two sides work together to help us function properly.

As the crisis of capitalism unfolds, the need for alternatives is felt ever more intensely. The struggle between radical movements and the forces of reaction will be merciless. A crucial battlefield, where the outcome of the crisis will in part be decided, is that of theory. Over the last twenty-five years, radical

intellectuals across the world have produced important and innovative ideas. The endeavour to transform the world without falling into the catastrophic traps of the past has been a common element uniting these new approaches. This book – aimed at both the general reader and the specialist – offers the first global cartography of the expanding intellectual field of critical contemporary thought. More than thirty authors and intellectual currents of every continent are presented in a clear and succinct manner. A history of critical thought in the twentieth and twenty-first centuries is also provided, helping situate current thinkers in a broader historical and sociological perspective.

A new edition of the bestselling classic – published with a special introduction to mark its 10th anniversary This pioneering account sets out to understand the structure of the human brain – the place where mind meets matter. Until recently, the left hemisphere of our brain has been seen as the ‘ rational ’ side, the superior partner to the right. But is this distinction true? Drawing on a vast body of experimental research, Iain McGilchrist argues while our left brain makes for a wonderful servant, it is a very poor master. As he shows, it is the right side which is the more reliable and insightful. Without it, our world would be mechanistic – stripped of depth, colour and value.

Theodor Adorno and Max Horkheimer wrote the central text of "critical theory", Dialectic of Enlightenment, a measured critique of the Enlightenment reason that, they argued, had resulted in fascism and totalitarianism. Towards a New Manifesto shows the two philosophers in a uniquely spirited and free-flowing exchange of ideas. This book is a record of their discussions over three weeks in the spring of 1956, recorded with a view to the production of a contemporary version of The Communist Manifesto. A philosophical jam-session in which the two thinkers improvise freely, often wildly, on central themes of their work--theory and practice, labor and leisure, domination and freedom--in a political register found nowhere else in their writing. Amid a careening flux of arguments, aphorisms and asides, in which the trenchant alternates with the reckless, the playful with the ingenuous, positions are swapped and contradictions unheeded, without any compulsion for consistency. A thrilling example of philosophy in action and a compelling map of a possible passage to a new world.

Groundbreaking account of the development of capitalism. The all-encompassing embrace of world capitalism at the beginning of the twenty-first century was generally attributed to the superiority of competitive markets. Globalization had appeared to be the natural outcome of this unstoppable process. But today, with global markets roiling and increasingly reliant on state intervention to stay afloat, it has become clear that markets and states aren ’ t straightforwardly opposing forces. In this groundbreaking work, Leo Panitch and Sam Gindin demonstrate the intimate relationship between modern capitalism and the American state, including its role as an “ informal empire ” promoting free trade and capital movements. Through a powerful historical survey, they show how the US has superintended the restructuring of other states in favor of competitive markets and coordinated the management of increasingly frequent financial crises. The Making of Global Capitalism, through its highly original analysis of the first great economic crisis of the twenty-first century, identifies the centrality of the social conflicts that occur within states rather than between them. These emerging fault lines hold out the possibility of new political movements transforming nation states and transcending global markets.

In the midst of the current ecological crisis, there is often lofty talk of the need for humanity to ‘ overcome its divisions ’ and work together to tackle the big challenges of our time. But as this new book by Razmig Keucheyan shows, the real picture is very different. Just take the case of the siting of toxic waste landfills in the United States: if you want to know where waste is most likely to be dumped, ask yourself where Blacks, Hispanics, Native Americans and

other racial minorities live and where the poorest neighbourhoods are. This kind of ‘ environmental racism ’ is by no means restricted to the United States: it is very much a global phenomenon. Keucheyan show how the capitalist response to the crisis has been marked by a massive expansion in ‘ environmental finance ’. From ‘ carbon markets ’ to ‘ pollution permits ’, ‘ climate derivatives ’ and ‘ catastrophe bonds ’, we are seeing a proliferation of nature-related financial products. Instead of tackling the root of the problem, the neoliberal strategy seeks to profit from environmental risks. Moreover, with the rise in natural disasters, resource scarcity, food crises, the destabilization of the poles and oceans and the prospect of tens of millions of ‘ climate refugees ’, Western powers are increasingly adopting a military response to ecological problems. The Cold War is over: welcome to the ‘ green wars ’. From New Orleans to the Siachen glacier via the Arctic floes, Keucheyan explores the landmark sites of this new ‘ climate geostrategy ’. Through a sharp critique of the way capitalism responds to environmental disaster, this innovative book provides a fresh perspective on some of the most critical issues confronting our societies today.

An urgent challenge to the prevailing moral order from one of the freshest, most compelling voices in radical politics today Being Numerous shatters the mainstream consensus on politics and personhood, offering in its place a bracing analysis of a perilous world and how we should live in it. Beginning with an interrogation of what it means to fight fascism, Natasha Lennard explores the limits of individual rights, the criminalization of political dissent, the myths of radical sex, and the ghosts in our lives. At once politically committed and philosophically capacious, Being Numerous is a reevaluation of the idea that the personal is political, and situates as the central question of our time--How can we live a non-fascist life?

This title is part of UC Press's Voices Revived program, which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, Voices Revived makes high-quality, peer-reviewed scholarship accessible once again using print-on-demand technology. This title was originally published in 1982.

Research on brain asymmetry, with particular emphasis on findings made possible by recent advances in neuroimaging.

This book addresses the seismic political events of Donald Trump's presidency and the British vote to leave the EU. It explores why citizens vote against their own best interests, and demonstrates the role and value of universities in a time when evidence, expertise and facts often dissolve into opinion, emotion and fake news.
