From 1979 to 1997 Britain was a laboratory for experiments in local governance as the control and delivery of local services was switched from elected councils to appointed boards (quangos), private companies or self-management. This book is about four models of local governance: the traditional 'localist' model, the New Right's 'individual' model, the New Left's 'mobilisation' model, and government's own 'centralist' model. It tests them against public opinion as expressed in 2203 interviews with ordinary citizens, 788 with councillors, and 902 with members of appointed boards.

Eihei Dogen Zenji, the 13th-century Zen master central to bringing Zen from China and helping it take root in Japan, is renowned as one the world's most

remarkable religious geniuses. Realizing Genjokoan is a comprehensive introduction to the teachings and approach of this great thinker, taking us on a guided tour of the most important essay – the Genjokoan – in Dogen's most significant work, called the Shobogenzo. Our tour guide for this journey is Shohaku Okumura, a prominent teacher in his own right who has dedicated his life to translating and teaching Dogen.

ANA and the American College of Cardiology Foundation convened an array of cardiovascular health experts to develop this succinct and practical guide. This completely updated document is unique, in fact, as a unifying effort due to participation and contribution of 16 nursing organizations whose constituency includes cardiovascular nurses. Reflecting the cumulative work of three previous iterations (and including their content), this book is a foundational volume. It articulates the essentials of the specialty, its accountabilities and activities – the who, what, when, where, and how of its practice – for both specialists and generalists. The standards themselves – six for nursing practice and nine for nursing professional performance – are those by which all nurses in this specialty practice. Together, along with each standard's set of measurement criteria, these reflect the perspectives and priorities of cardiovascular nursing. The book's summary discussion of the scope of such practice – its characteristics, development and trends, education and training, its practice environments and settings, its general and specialized practice roles, its ethical and conceptual bases – lends a broad context for understanding and using these standards. While Cardiovascular Nursing: Scope and Standards of Practice is a reference and guide primarily for practicing nurses and nursing faculty and students, it is also an essential source document for other cardiovascular specialists, healthcare providers, researchers, and scholars, along with those involved in funding, legal, policy, and regulatory activities.

This book is an essential resource for health visiting students that reflects the key changes required of health visiting practice at the beginning of the new millennium. It is a key text for specialist practitioner programmes and also for existing practitioners who are furthering their practice and academic development. It brings together the elements of theory and practice which are essential to health visiting practice. The book is research based and uses relevant evidence to support discussions. A particular strength is the use of case studies and practice examples to illustrate the theoretical discussions. Comprehensive coverage of all areas of health visiting practice will give the new practitioner confidence. Case studies help to relate the theory to practice. The up to date evidence base includes the latest research. The wide range of contributors ensures that the content is written by experts in their field. Coverage of aggression and violence, the needs of ethnic minorities, and complementary therapies reflects the growing role of the HV in relation to contemporary issues. Fully updated throughout to reflect changes in practice including re-organisation of the health care service, changes in social policy, child protection and nurse prescribing. New chapters on Working with individuals and families; Working with social groups and communities; Working with socially excluded groups; Quality improvement through leading and managing change; and Nurse prescribing. Content reorganised to reflect changes in emphasis of various issues in practice. Addition of useful websites for further information.

These New editions of the successful, highly-illustrated study/revision guides have been fully updated to meet the latest specification changes. Written by experienced examiners, they contain in-depth coverage of the key information plus hints, tips and guidance about how to achieve top grades in the A2 exams.

Presents an international symposium and incorporates a complete review in the area of essential fatty acids and infant nutrition. This book brings together the results of the exchange of views between clinicians and researchers in Europe and in the United States and Canada.

Biological Activities of Steroids in Relation to Cancer covers the proceedings of the conference sponsored by the Cancer Chemotherapy National Service Center, National Cancer Institute, National Institutes of Health, and the U. S. Department of Health, Education and Welfare. The text focuses on the influence of steroids on medical approaches to the cure of cancer, including steroid chemistry, estrogen metabolism, and mammary cancer. The selection first offers information on steroids growth and cancer, advances in steroid chemistry, and the physiology and pharmacology of steroids affecting tumor growth. Discussions focus on rapid development of mammary cancer, pituitary functions, androgens, estrogens, and progestins. The book also ponders on the binding of steroid hormones by plasma proteins; the effects of steroids on the levels of the plasma 17-hydroxycorticosteroids and the serum protein-bound iodine; and the metabolism of dehydroisoandrosterone. The text evaluates studies on estrogen metabolism, biochemical parameters of estrogen action, and enzymatic transport of hydrogen by estrogenic hormones. The manuscript also elaborates on the fate of steroid estrogens in target tissues, effect of steroids on calcium dynamics, and steroids and experimental mammary cancer. The selection is a valuable source of information for readers interested in the use of steroids in treating cancer.

The Sources and Nature of the Statistics of the United Kingdom, produced under the auspices of the Royal Statistical Society and edited by Maurice Kendall, filled a notable gap on the library shelves when it made its appearance in the early post-war years. Through a series of critical reviews by

many of the foremost national experts, it constituted a valuable contemporary guide to statisticians working in many fields as well as a bench-mark to which historians of the development of Statistics in this country are likely to return again and again. The Social Science Research Council* and the Society were both delighted when Professor Maunder came forward with the proposal that a revised version should be produced, indicating as well his willingness to take on the onerous task of editor. The two bodies were more than happy to act as co-sponsors of the project and to help in its planning through a joint steering committee. The result, we are confident, will be judged a worthy successor to the previous volumes by the very much larger 'statistics public' that has come into being in the intervening years. Mrs SUZANNE REEVE Mrs E. J. SNELL Secretary Honorary Secretary Economic and Social Research Council Royal Statistical Society *SSRC is now the Economic and Social Research Council (ESRC). vii MEMBERSHIP OF JOINT STEERING COMMITTEE (December 1986) Chairman: Miss S. V. Cunliffe Representing the Royal Statistical Society: Mr M. C. Fessey Dr S. Rosenbaum Mrs E. J.
