Frog and Toad Series by Arnold Lobel - Goodreads

As stated in the introduction, frogs and toads are actually the same animal from a scientific taxonomy standing. The likely ancestors of amphibians were a type of fish from the clade Sarcopterygii, known also as lobe-finned fish. They lived during the Devonian period which became known as the 'Age of Fishes'.

Frog Vs. Toad - What is the Difference? - With Pictures

Frogs and toads are amphibians belonging to the order Anura and taxonomy does not make a distinction between the two. True frogs belong to the family Ranidae and members of the family Bufonidae are called true toads.

Well, in reality, nothing. Scientifically speaking, toads and frogs are not classified into specific taxonomical groups. However, in casual settings, distinctions are made between the frog and the toad with the idea that all toads are frogs but not all frogs are toads. Toads have unique features that make them distinct from the main frog category.
