The general structure of the sensor device is based on pairs of oval SRRs coupled to a coplanar waveguide as investigated in [].In Figure 1, the schematic drawings of a circular and an oval SRR with corresponding dimensions are shown.From the property of SRRs providing a small electrical size, a quasi-static equivalent circuit model can be applied that corresponds to an LC resonant circuit.

Planar transmission lines are transmission lines with conductors, or in some cases dielectric strips, that are flat, ribbon-shaped lines. They are used to interconnect components on printed circuits and integrated circuits working at microwave frequencies because the planar type fits in well with the manufacturing methods for these components. Transmission lines are more than simply interconnections. With simple interconnections, the propagation of the electromagnetic wave along the wire is fast

To demonstrate the use of the planar filter design approach, an example filter will be designed and fabricated. The design goal is a relatively narrow bandpass filter centered at 14.5 GHz, with more than 40 dB rejection at the image frequencies, i.e., at 13.0 and 16.7 GHz.
