The 'Push-Pull' Farming System

Push-pull technology is a strategy for controlling agricultural pests by using repellent "push" plants and trap "pull" plants. For example, cereal crops like maize or sorghum are often infested by stem borers. Grasses planted around the perimeter of the crop attract and trap the pests, whereas other plants, like Desmodium, planted between the rows of maize, repel the pests and control the parasitic plant Striga. Push-pull technology was developed at the International Centre of Insect ...

Push-pull agricultural pest management - Wikipedia

2 The Push-Pull Farming System Besides being nutritious for dairy cows, it repels insect pests of maize and substantially reduces damage from striga, a destructive parasitic weed. In short, the push- pull system can improve food security and farm income in an environmentally friendly way, making it an ideal

Online Library The Push Pull Farming System

A prominent example is push-pull developed in sub-Saharan Africa using a combination of companion plants delivering semiochemicals, as plant secondary metabolites, for smallholder farming cereal production, initially against lepidopterous stem borers. Opportunities are being developed for other regions and farming ecosystems.

Push-pull Farming Systems | ECHOcommunity.org

'Push-pull' is the basis of an integrated crop/livestock production system which does not require high levels of external inputs. It harnesses complex chemical interactions that destroy stem borer larvae and inhibit the growth of Striga weed.

MAIZE/LIVESTOCK 'Push-pull' fights pests,

The International Centre of Insect Physiology and Ecology (Icipe) said that the "push-pull" crop system also promotes soil fertility and hinders the striga weed from attaching roots of cereal crops.

‘Push-pull’ crop system to curb fall armyworms - The East

...

Both push and pull systems have pros and cons, so a push/pull system that uses different approaches for different parts of your business may be helpful, especially when your business is switching from one method to another. The push/pull system may look different for different companies.

Inventory Management: Push and Pull Systems

Push-pull is an appropriate technology for poor farmers in East Africa because it is based on locally available renewable inputs and can thus be easily integrated into traditional poly-culture cropping systems. On a larger scale, principles of push-pull can be applied to low-input and organic agriculture systems worldwide.
